What's your company's unique selling point?

We offer professional treatments and consultations to each of our clients.

Prior to a treatment, each patient has a consultation with one of our experienced cosmetic doctors where a plan is then prescribed. This is followed by our therapists who work to strict protocols developed by our dedicated internal training team. This ensures that our high standards are always adhered to.

What's been your best-selling product/treatment?

Injectables (Botox and fillers) remain our best selling treatment. It's closely followed by our medical weight-loss programme Slender Wonder.

What trends have come to the fore in your industry over the past decade?

Volumising with dermal fillers is the latest trend to enhance the shape of your face. We call it "Liquid Facelift" because of the larger volume of fillers involved. Another trend gaining popularity is the use of cannulas to limit the bruising that may occur.

What specials and/or new treatments can we expect?

We recently introduced the Pearl Fractional Treatment for skin rejuvenation. It can produce results after just one treatment. 3D Body Renewal is for the body, and it is a non-surgical alternative to liposuction. This combination treatment addresses resistant fat and assists with weight loss. But it is also important to remember that a lifestyle change is vital for long-term maintenance following your treatment.
